THE FALCON LIMESPREADER

The Falcon Limespreader is an easy to operate, low cost implement specifically designed to spread lime on the field. It is a tractor drawn wheel mounted machine consisting of a 3,0 metre wide hopper with adjustable apertures at the bottom.

The spreading rate is controlled by a lever which is also used to shut off the flow of lime at the headland. Two agitation shafts with paddles, driven directly by the land wheels, ensure an even flow. The lime is discharged almost at ground level eliminating wind drift.

The Falcon Limespreader has no PTO drive or gears, so maintenance is simple. Very little skill is needed to operate it efficiently. It can be pulled by the lightest tractor and is easy to refill because of the low loading height.

A large percentage of the agricultural land in South Africa requires periodic applications of lime in order to maintain the correct level of fertility, therefore the Falcon Limespreader provides a low cost solution to the problem of spreading agricultural lime.

THE RANGE OF FALCON LIMESPREADERS

Model	Description	Capacity	Mass (Kg)
A0064	F400 Limespreader	2.4m ³	380
A0065	F500 Trailed Limespreader	3.0m ³	480
